

IT2120 - Probability and Statistics

Lab Sheet 05

IT24103586 – Herath H.M.T.P

Exercise

1. Import the dataset ('Exercise – Lab 05.txt') into R and store it in a data frame called "Delivery_Times".

2. Draw a histogram for deliver times using nine class intervals where the lower limit is 20 and upper limit is 70. Use right open intervals.

3. Comment on the shape of the distribution.

The shape of the distribution is unimodal with a primary peak in interval [36.6,42,2] minutes, where 9 deliveries occur. It appears approximately symmetric around the center but with a slight right skew, as the tail extends to higher value (up to 67 minutes) and there is a secondary cluster or minor peak in the (53.3,58.8) interval with 6 deliveries

4. Draw a cumulative frequency polygon (ogive) for the data in a separate plot.
